2.4.4 Cross section of solid shapes

When we cut the vegetables in cross section for cooking purpose, we see some plane figures in it. For example, the cross section of a carrot and a plantain stem is a circle.

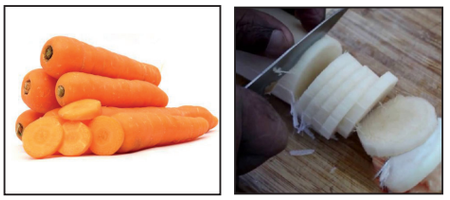

Fig. 2.36

In the same way, we can see squares and rectangles in the cross section of a bread loaf and bricks etc.,

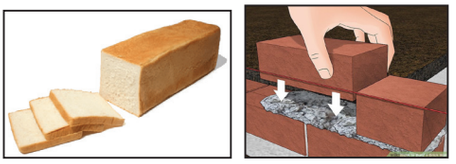

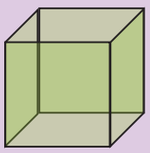

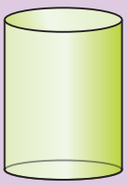

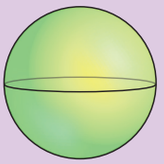

Fig. 2.37

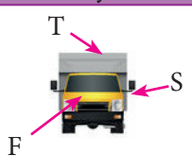

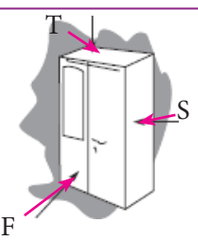

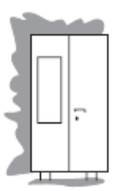

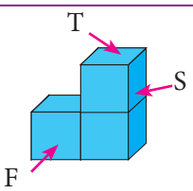

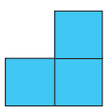

Activity

Draw and name the two dimensional shapes (2-D) which you get in the cross section of the following solid shapes.

Solids			
2-D Shape			
Name	Square		

2.4.5 3-D shapes in different views

A 3-D object may look different from different positions. View of a 3D shape is what you see while observing the object from different positions. Some of the views are front view, top view and side view. The different views of some of the objects are as shown below.

Object	Front View	Top View	Side View
