8. Using Euler's formula, find the unknowns.

S.No.	Faces	Vertices	Edges
(i)	?	6	14
(ii)	8	?	10
(iii)	20	10	?

SUMMARY

- If any two points on a circle are joined by a line segment, then the line segment is called a 'chord'.
- A diameter of a circle divides it into two equal parts. It is the longest chord of a circle.
- A part of the circumference of a circle is called the circular arc.
- The plane surface that is enclosed between two radii and the circular arc of a circle is called a 'sector'.
- The angle made by the sector with the centre of the circle is called the 'central angle'.
- The perimeter of a combined shape is the sum of all the lengths of the sides that form a closed boundary.
- The area of combined shapes is nothing but the sum of all areas of the simpler shapes in it.
- The shapes which have three dimensions namely length, breadth and height are called three dimensional shapes (or) simply called as 3-D shapes.
- A cube has 6 faces, 12 edges and 8 vertices.

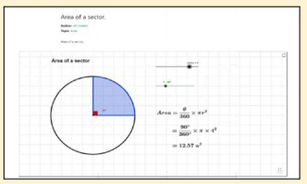

ICT CORNER

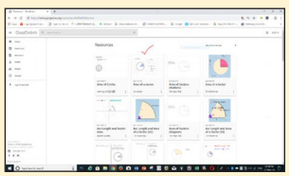

"Through this activity you will know about how to find the perimeter and area of the sectors."

Step-1 Open the Browser and type www.Geogebra.com (or)scan the QR CODE given below.

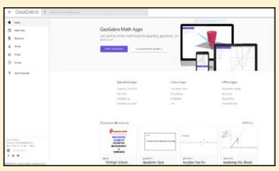

Step-2 Type Area of sector on the search column

Step-3 Move the radius slide and degree slide. You will get various results.

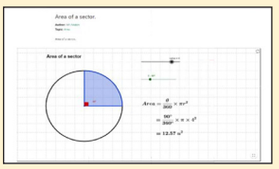

Step 1

Step 2

Step 3
