Activity

4. We again use four identical 30°–60°–90° set- squares for this activity. Note carefully how they are placed touching one another.

   (i) Do we get a parallelogram now?

   (ii) What can we say about its lengths of sides, angles and diagonals?

   (iii) What is special about their diagonals?

Based on the outcome of the above activities, we can list out the various properties of the above quadrilaterals, all of which happen to be parallelograms!

Special Quadrilaterals	All sides	All angles	Opposite Sides		All angles	Opposite angles	Diagonals	
	Equal	Equal	Equal	Parallel	90°	Supple-mentary	Bisect each other	Cut at rt.angles
Parallelogram	Sometimes	Sometimes	Always	Always	Sometimes	Sometimes	Always	Sometimes
Rhombus	Always	Sometimes	Always	Always	Sometimes	Sometimes	Always	Always
Rectangle	Sometimes	Always	Always	Always	Always	Always	Always	Sometimes
Square	Always	Always	Always	Always	Always	Always	Always	Always
