6.4.1 (i) Construction of a histogram for continuous frequency distribution:

Example 6.6

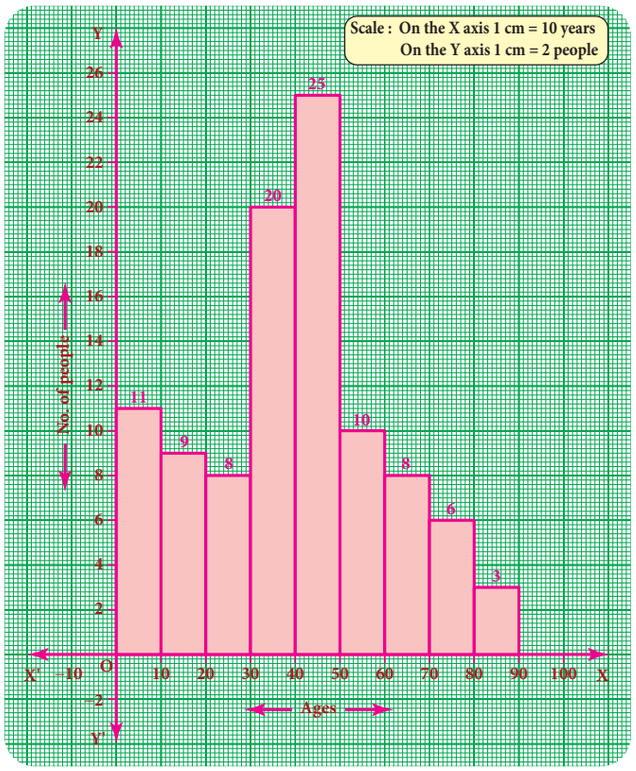

Draw a histogram for the following table which represents the age groups from 100 people in a village.

Ages	0-10	10-20	20-30	30-40	40-50	50-60	60-70	70-80	80-90
Number of people	11	9	8	20	25	10	8	6	3

Solution:

The given data is a continuous frequency distribution. The class intervals are drawn on x-axis and their respective frequencies on y-axis. Classes (ages) and its frequencies (number of people) are taken together to form a rectangle.

The histogram is constructed as given below.

Note

If class intervals do not start from '0' then, it is indicated by drawing a kink (Zig-Zag) mark (⩘) on the x-axis near the origin. If necessary, the kink mark (⩘) may be made on y-axis or on both the axes. i.e it indicates that we do not have data starting from the origin (O)

6.4.1 (ii) Construction of histogram for discontinuous frequency distribution:

Example 6.7

The following table gives the number of literate females in the age group 10 to 45 years in a town.

Age group	10-15	16-21	22-27	28-33	34-39	40-45
No. of females	350	920	850	480	230	200

Draw a histogram to represent the above data
