7.8.1 Comparing containers of different size

Many times, items are packed in different sized of containers.

- Sometimes, shoppers save money by selecting a larger container of the same item. For example, 1 litre of milk often costs less than 5 units of 200ml pack of milk.
- Sometimes, a store has two prices for the same item. One price is for buying a single item, while the other price is for buying more than one of the same item. For example, groundnut oil may cost ₹135 for 1 litre bottle and ₹240 for 2 litre bottles. In this case, if you buy two 1 litre bottles, you will pay more. Sometimes, buying in quantity also saves money.
- Sometimes, the consumer may not be able to use up the larger size of an item before it becomes stale or outdated. To find out which size container is the best to buy, you will need to know the price of single pack of the contents.

Activity

Consider that you want to buy 12 litres of the same quality of edible oil at your budget price of ₹250 per litre. In a supermarket, there are a lot of offers on various oil brands. Some of the offers are given below. Complete the table and find which one is the best offer for you and how much you will save for your total purchase.

Which one is the best deal?

Product (Edible oil)	Size (in litres)	Regular Price (₹)	Offer	Special Price (₹)	Saving Price (₹)	Cost of 1 litre (₹)	Cost of 12 litres(₹)
	1	293	₹ 50 off	243		243	
	2	850	1 *l* +1 *l* combo	499	351 (850-499)	249.50	
	5+1 = 6	2000	Buy 5 *l* get 1 *l* free	1500			3000
	2+2 = 4	1486	Buy 1 get 1 free	743		185.75	
	1+1= 2	850	Spl. offer 1 *l* pack of 2 ₹ 390	390		195	
	12 (1) = 12	5100	1 *l* pack of 12	1650	3450		

Best offer price for you _____

Amount that you saved for your total purchase _____
