Measurement

This activity enables the students to learn about the various types of Time keeping devices

History of timekeeping devices

From Wikipedia, the free encyclopedia

For thousands of years, devices have been used to measure and keep track of time. The curr
easurement dates to approximately 2000 BC from the Sumerians.
The Egyptians divided the day into two 12-hour periods, and used large obelisks to track the r
water clocks, which were probably first used in the Precinct of Amun-Re, and later outside Eg
by the Ancient Greeks, who called them clepsydrae. The Zhou dynasty is believed to have us
same time, devices which were introduced from Mesopotamia as early as 2000 BC.
Other ancient timekeeping devices include the candle clock, used in ancient China, ancient Ju
timestick, widely used in India and Tibet, as well as some parts of Europe; and the hourglass,
clock. The sundial, another early clock, relies on shadows to provide a good estimate of the h
cloudy weather or at night and requires recalibration as the seasons change (if the gnomon w
The earliest known clock with a water-powered escapement mechanism, which transferred ro
dates back to 3rd century BC in ancient Greece,[2] Chinese engineers later invented clocks inc
mechanisms in the 10th century,[3] followed by Iranian engineers inventing water clocks driver

Steps

- Open the Browser and type URL link given below (or) Scan the QR Code.
- Click and select the "History of time keeping devices"
- Options will be given. Select any content (Eg) Digital clock
- It gives clear understanding of the "History of time keeping devices"
