II. It refers to the process in which the liquid form of water changes into gaseous form.

III. Water boils at 100°C temperature but, it actually begins to evaporate at 0°C.

IV. It is responsible for the formation of clouds.

a) I and IV are correct

b) II only correct

c) II and III are correct

d) All are correct

V State whether the following statements are True or False

1. Water boils at 212°F temperature but, it begins to evaporate at 32°F.
2. Mist is not the tiny droplets of water hanging in the air.
3. The sub-surface runoff is usually referred as interflow.

VI Answer briefly

1. Write a short note on aquifer.
2. Define " hydrological cycle".
3. How is the dew formation takes place?
4. Write a short note on surface run-off.

VII Give reasons

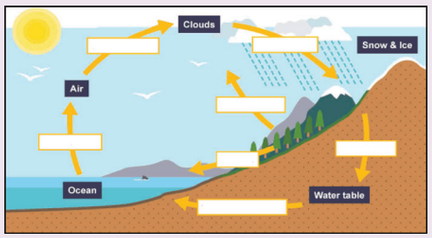

1. Infiltration of water is low in the region of non-porous soil.
2. Fresh water is less on the earth.
3. Snowfall is common in the polar region and mountainous regions.

VIII Answer in a paragraph

1. Explain the different stages involved in the hydrological cycle.
2. Distinguish between evaporation and transpiration.
3. Give a detailed explanation on different forms of precipitation.
4. Explain the run-off and its types.

ACTIVITY

Find out the missing components of Hydrological cycle in the given diagram and fill it up appropriately.
